www.blackice.comThe other
day I found myself wishing
for the days when I had so
much extra time that I could
just clean a messy room. A

chore that shouldn't take more than 20 minutes takes me longer than that when my kids are around. Now I'm trying to go through my closet, and clean out my dresser drawers. I've got a lot of clothes, some that I still love, and some that I no longer wear. I'm working on

my closet, my dresser, and my kids' rooms, as well as the guest room. I've got less time to do it all, and I'm trying to enjoy the task. I haven't done much decluttering lately. I always seem to have a lot of cleaning to do. It seems I'm not able to focus on one area

at a time, and always seem to have a “hurry up and wait” attitude. Perhaps I’m procrastinating or “overcommitting” and not saying no to every request that comes in. Maybe I’m not getting my priorities straight.

Researcher's Dilemma, but I can tell you that the grassy substance that is currently sitting in the corner of my laboratory is the most exciting, promising, life-changing substance I've ever encountered. And as we experiment on this wonder substance, I am confident

that within my lifetime we will be able to create, from the ground up, a world without diabetes. My lab is currently testing this exciting new substance on mice, and the results are impressive. The mice are acting like they have never had diabetes, and as far as I

can tell, there are no adverse side effects to the treatment. Additionally, the way this substance acts on the body is similar to how insulin does. It keeps blood sugar levels in check, and the patients don't even
