N-Shield Crack For PC [Latest]

Blocks out programs and processes from running and changing files on your PC. The Anti-Exe Shield is easy to use. Just a few mouse clicks and a few minutes are all it takes to setup a program for protection. Easy to use, the program will show you all the steps it is doing automatically, then you can set the program to start at Windows startup and activate the Anti Exe Shield whenever you need it. Don't worry that the programs that are blocked on your PC will change, since the Anti Exe Shield will be doing all the work for you. The Anti Exe Shield will work with programs running as background tasks, such as web browsers, some software installers, virus programs, and other applications that you might run from time to time. You can find out how to run programs as Windows services on our page about How to Run Programs as Windows Services. Do you have a particular kind of file that you never want to show up on your computer? When do you have a file you want to have available for all time, but never wanted anyone else to have access to it? Anti File Shield will keep those files out of reach and protect your confidential information and privacy. To make it even easier to protect your information, we have included a password manager that will come pre-set up with passwords and security data for your convenience. You can change the saved passwords at any time, they are encrypted for your security. All data is saved locally in a database so it does not leave your PC and is protected from viruses and worms. It has saved me countless hours of work and it will help you with your work and protect your privacy too. Just a few mouse clicks are all you need to set Anti File Shield up and running and protecting your information. Anti File Shield gives you a quick and easy way to protect confidential information from accidental access. Anti File Shield Description: Anti File Shield is your tool to protect confidential information like credit card numbers, account numbers, bank account numbers, dates, phone numbers, passwords, internet addresses and passwords from prying eyes. It will block out access to those files, programs or documents and protect your privacy. It does not leave your PC and it will not change your PC settings. Your Anti File Shield toolbar icon will start. Just right click on the icon, select "Block File" and click the "Blocked File" button. A password field will appear, type in

N-Shield License Keygen

Manage and block unwanted processes on your computer in a few simple steps. Updated: Description: N-Shield is a small software application whose purpose is to help you block unwanted processes using straightforward features. The tool's aim is to add an extra layer of protection in order to restrict malware or malicious processes from infiltrating in your system. The advantages of being portable The utility comes in a portable package which can be deployed on your system without having to go through installation steps. You can gain quick access to the program's GUI by simply running the EXE file. Good news is that the app doesn't store configuration data and write entries in your Windows registry, so you can run it without administrative privileges on the target system. Plus, you may copy it on any USB flash drive and carry it with you. Intuitive layout N-Shield reveals a clean feature lineup that offers an overview panel with general information about the status of the protection. Smart buttons implemented in the GUI enable you to quickly start or stop the protection field. Statistics are also revealed about the number of items found in the whitelist and blacklist, number of active processes and blocked items, last blocked date, as well as total number of detected files. Additionally, the log records information about all your actions, date and time. Each time a process tries to run, the program displays a popup notification that allows you to block or ignore it. Reg shield available only for Windows XP The Reg Shield panel gives you the power to disable the registry editor, task manager, CMD, folder options, hidden and system files, and tray menu, as well as lock taskbar. Additionally, you may block add/remove program, remove page, and Win setup page options, and turn off several network parameters, such as entire network, file sharing, network setup, print sharing and workgroup content. Manage processes and configure several settings N-Shield gives you the possibility to view all running processes on your system, refresh the list with a single click, kill the selected items, as well as scan for viruses. Plus, you can view the blocked processes and allow permission for running for the selected ones, configure a blacklist and whitelist, as well as analyze suspicious files. Last but not least, you can run the app at Windows startup and activate the 'Anti Exe Mode' for blocking items from both the whitelist and 09e8f5149f
