Planner is an application conceived to keep track of all your daily appointments and things that need to be done. It has a very simple and intuitive UI, but it's nevertheless capable of showing various event sources including those from Yahoo, Gmail, iCal, Google Calendar, and many others. First of all, you'll have to install the program on your PC or Mac. Then, you have to set it up by clicking its "Configure Planner" icon, and you'll be asked to choose which calendar you're going to sync your data with. It's definitely recommended to choose one of the stock calendars in order to avoid losing track of your events. Planner also provides a link to a manual about how to fix recurring date conflicts. On the

next screen you have to define its parameters, as well as those of the device(s) used for recording events. Lastly, select the calendar you wish to use, change calendar width, choose the format of your date or time, as well as the screen scale and some other options. After that, everything is good to go, and you can start adding new events or updating ones that are already set. In the “Add Event” screen you can choose the types of info to include in your appointments. It is possible to select them from a drop-down list, and you can pick between different event sources, calendars, reminders, locations, keywords, event notes, and web links. You can also view your events in a list, or format them according to your liking. Here you can also see your upcoming events in a list at the top right corner, organize your events by type, date, location, or automatically according to a custom expression. To edit an event you have to click on the event’s name, find a specific event you wish to modify, and then click on it. Similarly, to delete an event you have to click on the event name, and then press the “Delete” or “Delete All” button. Other key features include the ability to add recurring events, export your data, block the date when you don’

What's New In?

The Planner is a simple, lightweight and low cost solution. As the name of the tool suggests, you can use it to manage your whole schedule. It supports the creation of new calendar events, appointments and tasks, as well as the assigning of tags to these items. You can also see what time is allocated to each appointment, and even arrange your tasks around a particular time slot. You can also plan for events that are out of a specific time range, and also have the ability to see who has signed up for a particular event. However, you need to be aware that the tool does not use Windows Server or Exchange Server for scheduling. Getting started with Planner is extremely simple. You can simply drag and drop items into the application or choose them from a file attached to a mail message. Each item includes a set of properties, and you can use these details to configure the item. You can even associate an email address with each appointment or task. Unfortunately, the search feature does not work well. For instance, if you use the "Tags" option, you'll still need to open each item in order to get access to its available tags. Nevertheless, the tool is still versatile, and you can create your own set of appointments, tasks or events. Simple to use, but also lots of features From a visual standpoint, Planner offers a very simple user

interface. The application comes with a toolbar on the top that provides you with a few key functions. Among them, you can get access to all the elements that are available to you inside the application, or you can open each item in a new window. This tool is simple to use, so the learning curve is quite short. After you've been using it for a while, you'll probably start to realize how much functionality Planner has to offer. Planner is a lightweight and simple tool, but it packs a lot of features. With it, you can effectively plan your schedule. Pico Markdown is a rather simple application that provides you with an excellent way to format your text-based documents. The fact that it's a simple and lightweight program means that it's not heavy-weight. You can use it for improving the look of your documents with things like the ability to highlight text, add graphics, insert tables and a lot more. Highlights specific areas of text by increasing the brightness of the colors. Additionally, you have the ability to specify where the text should be highlighted. For instance, you can select a
