Elements: More like a kid sister Adobe has two cousins — Elements and Photoshop Elements — that are relatively well regarded and aimed at beginner and intermediate users. They work in the same ways as Photoshop, but they have a much easier-to-use interface. Adobe started Elements in 2004 as a basic image editor for beginners to play around with, then

Can I Use Photoshop? Photoshop is the de facto standard for image editing. But not everyone can use Photoshop. The reasons are many and include both technical and personal limitations. In order to ensure that all website designers are able to use our themes (for example), you need to use a design program that integrates with our themes and supports our specific design standards. You can follow the tutorial in this blog if you'd like to learn how to use PageLiner with Photoshop. So if you wish to be one of our designers, you should use Photoshop as your main design tool. The reasons why not to use Photoshop are the following: If you use the "default" Photoshop design options, the generated pages will probably have too many elements and too many CSS rules, and as a result you will either get an error when you submit the design or it will take much longer to render. Also, if you use the "default" options (i.e. 24pt fonts, long lines, background gradient), the design will definitely be "pixelated" as a side-effect and will need extra tweaking in order to make it nice-looking. Designs for print and screen Our themes are designed with Photoshop Elements and graphics programs like GIMP (which uses the same file format). Photoshop Elements is a great graphics program but it is a bit dated. This means that its interface is very basic, its layers and tools can be frustratingly unintuitive, it lacks important features and sometimes small design changes you want to make will not be possible (while the same change in Photoshop Elements will generally work). If you are not familiar with Photoshop, you'll have trouble. If you are familiar with Photoshop Elements, but not with Photoshop, you'll have to deal with the fact that what you know (a bit of everything) might not be enough to create a beautiful design. We'll only create designs for print at the moment. So, if you are unfamiliar with print design, this will only further limit you. A good alternative to Photoshop Elements is Affinity Designer. Not only does it include all the stuff you need to create designs for print (for example, you get a library where you can place text, images and other design elements), but it also has all the buttons, tools, tools and menus you will need to create designs for the web. Q: SQL Reporting Services 2016 error Connection String I tried to install SQL Reporting Services 2016 (16.0.4000.170) on my development machine but got an error on install process: Installing package: 'Microsoft SQL Server Reporting Services 2008 R2 Native' on server Productivity-SQL2014RS did not succeed. A connection was successfully established to MSSQLSERVER, but a login page cannot be displayed. Additional information may be available by searching Microsoft Knowledge Base articles. I did all the correct things like the answer from here: Close all SSRS instances on the server Stop all Reporting Services services Delete the ReportServer folder on the SQL Server Data Backup the original ReportServer folder on the SQL Server Data Install the SSRS on the new folder on the SQL Server Data Restart the SQL Server Reporting Services Services The error remained, so I tried to turn off firewall, other than that, nothing I did helps. A: I found the answer to the problem. I used the Advanced mode of the GUI to install the SSRS and typed the address to the databases and username. But, the user I entered was the domain user. By default, SSRS set up a separate user for the administrative access on SQL Report Server. So, the user that I used in the GUI was not the user that used for the Report Server. Fortunately, I could avoid the error by having the user I used previously. Work continues on new Berkeley High School Students and teachers on campus have had a front-row view of the new Berkeley High School for several years. From roofing the theater stage to repairing the fountains at Martin Luther King Jr. Plaza, construction of the new Berkeley High School has been going full-steam ahead since the 2012-13 school year. "Berkeley High School will be the first school in Berkeley to move from being a single-sex school to a co-ed school," Principal Nicole Martinez said in 2012, after the new school was unveiled to community members. "That's the beautiful irony of it. Berkeley High School was one of the first co-ed schools in Berkeley, actually. We're bringing that to the forefront of our campus again." On
