Appendix A: Autodesk Products and Services AutoCAD and AutoCAD LT: AutoCAD is a professional CAD application that allows you to create and edit 2D and 3D drawing images using blocks of data in a vector (scalar) or raster (pixel) format. With AutoCAD, you can draw lines, planes, arcs, circles, polygons, circles, and splines. You can also design and create technical drawings in the shape of 2D plans or 3D images. You can also transfer designs from another CAD application, like Pro/ENGINEER, Inventor or Solidworks, and annotate them with comments. AutoCAD is more than just a traditional CAD program; it's the software platform on which all of the Autodesk Design applications are based. What's New in AutoCAD: • Construction tools, added in AutoCAD 2016 for Mac, extend the AutoCAD Drawing environment to the AEC sector. • Drafting tools, added in AutoCAD 2016 for Windows, give you the ability to easily create 2D drawings and 3D models with your mouse, workstation, and smartphone. • New 3D tools and a new 2D drawing experience make it easier for designers to explore, manage, and draw your designs. • AutoCAD 2013 2D and 3D features make it easier to create drawings, add details, and annotate your designs. • Workflows made for large, complex drawings, like drawing furniture, showcase the strength of a single drawing file and improve the overall drawing productivity. • New support for information visualization, such as textures, normals, and other objects, helps you visualize your designs. • New stereolithography (SLA) and support for SolidWorks files, make it easier to place, shape, and position geometry. • New laser-cutting, plasma-cutting, and water jet-cutting capabilities give you a solid work environment for cutting your designs. • New tools for geometry tools, including command blocks and simple geometry tools, make it easier to create and edit geometry. • New tools and functions that allow you to use other applications' drawings and data in your own drawings. • Tools, functions, and improvements to existing drawing tools make it easier to work with

How do you split a string? I'm looking for a function similar to the String.split(String) but with two arguments. A: Use String.split(Pattern, int). For example, String input = "a b c d"; String[] split = input.split("[ ]+", 2); This will split the string on whitespace or any character you specify with [ ], and the second argument is the maximum number of splits. The first split returns an array with one element, the rest of the string, and the second split returns an array with two elements, the rest of the string and the space. A: Take a look at the String.split() method. A: You can use String.split() or String.split(String). split(String s, int i) #!/bin/bash #script to set the cache directories #name: Alpine Laucnh #purpose: to set the file paths of the cache. #build the script to change the paths of the cache function change\_paths() { local path="\$1" local tmp\_dir="\$2" local dirs=\$(ls -1 /etc/apk/res/\* | grep -Eo '([A-Za-z0-9\_]\*)-(.\*)
